The Problem

Vendor Stickiness aka Roach Motel

You can't NORMALLY export an instance if:

It contains third-party software provided by AWS
Example: Windows or SQL Server or any instance
created from an image in the AWS Marketplace

It has more than one virtual disk

It has more than one network interface.

Kill roaches without poison
odor or mess

Cost to Export Using Clonezilla

AWS Data Transfer		\$140.47
Charges		\$140.47
Estimated US sales tax to be collected		\$0.00
Amazon Elastic Compute Cloud		\$298.97
Charges		\$298.97
Estimated US sales tax to be collected		\$0.00

Data Transfer IN To Amazon EC2 From Internet

All data transfer in	\$0.00 per GB
----------------------	---------------

Data Transfer OUT From Amazon EC2 To Internet

Up to 1 GB / Month	\$0.00 per GB
Next 9.999 TB / Month	\$0.09 per GB
Next 40 TB / Month	\$0.085 per GB
Next 100 TB / Month	\$0.07 per GB
Greater than 150 TB / Month	\$0.05 per GB

The Solution

“Clonezilla is a
partition and disk
imaging/cloning
program...”

Clonezilla Machine Specs

Clonezilla - ami-09307f75653f8792d

For Use Transferring from AWS to vm1

Root device type: ebs

Virtualization type: hvm

Owner: 916435243058

ENA Enabled: Yes

Debian Machine (any Debian Based Distro works)

- 30 GB Magnetic Storage
- t2.micro

Clonezilla Installation:

- sudo apt-get update
- sudo apt-get install clonezilla
- sudo drblsrv -i

Availability Zones

1. Choose AMI 2. Choose Instance Type 3. Configure Instance 4. Add Storage 5. Add Tags 6. Configure Security Group 7. Review

Step 3: Configure Instance Details

Configure the instance to suit your requirements. You can launch multiple instances from the same AMI, request Spot instances to take advantage of lower prices, or request Dedicated Hosts to run instances on dedicated hardware.

Number of instances [Launch into Auto Scaling Group](#)

Purchasing option ☐ Request Spot instances

Network [Create new VPC](#)

Subnet [Create new subnet](#)

Auto-assign Public IP ☐

Placement group

Capacity Reservation

Domain join directory [Create new directory](#)

subnets:

- subnet-0db1c631 | Default in us-east-1e
- subnet-f76d2092 | Default in us-east-1b
- subnet-d9af6a91 | Default in us-east-1d
- subnet-4ab13946 | Default in us-east-1f
- subnet-1fd7d644 | Default in us-east-1a
- subnet-2fd9d302 | Default in us-east-1c

IMPORTANT: The Clonezilla Instance needs to be in the same Availability Zone (Set On Machine Creation)

Security Group

aws

Services

1. Choose AMI

2. Choose Instance Type

3. Configure Instance

4. Add Storage

5. Add Tags

6. Configure Security Group

7. Review

Step 6: Configure Security Group

☐ sg-08aa1191eaa008fe8 CentOS 7 -x86_64- - with Updates HVM-2002_01-AutogenByAWSMP-1This security group was generated by

☐ sg-0aef6c7c1ea779a52 CentOS 7 -x86_64- - with Updates HVM-2002_01-AutogenByAWSMP-2This security group was generated by

☐ sg-0bae7cb7ef776fb9a CentOS 7 -x86_64- - with Updates HVM-2002_01-AutogenByAWSMP-3This security group was generated by

Consider a Clonezilla AMI

- Easy to Spin Up
- Easy to get the correct Availability Zone

Migrating a Linux Box

Linux Machine to Migrate

CentOS 7 (x86_64) - with Updates HVM

This is the Official CentOS 7 x86_64 HVM image that has been built with a minimal profile, suitable for use in HVM instance types only. The image contains just enough packages to run within AWS, bring up an SSH Server and allow users to login. Please note that this is the default CentOS-7 image that we recommend everyone uses. It contains ...

[More info](#)

[View Additional Details in AWS Marketplace](#)

Free tier eligible

CentOS 7 loaded from the
AWS Marketplace

- 8GB Magnetic Storage
- **Same Availability Zone**
 - t2.micro
 - 1 GB RAM
 - 1 vCPU
- Security Group for SSH

Set Sudo / Passwd

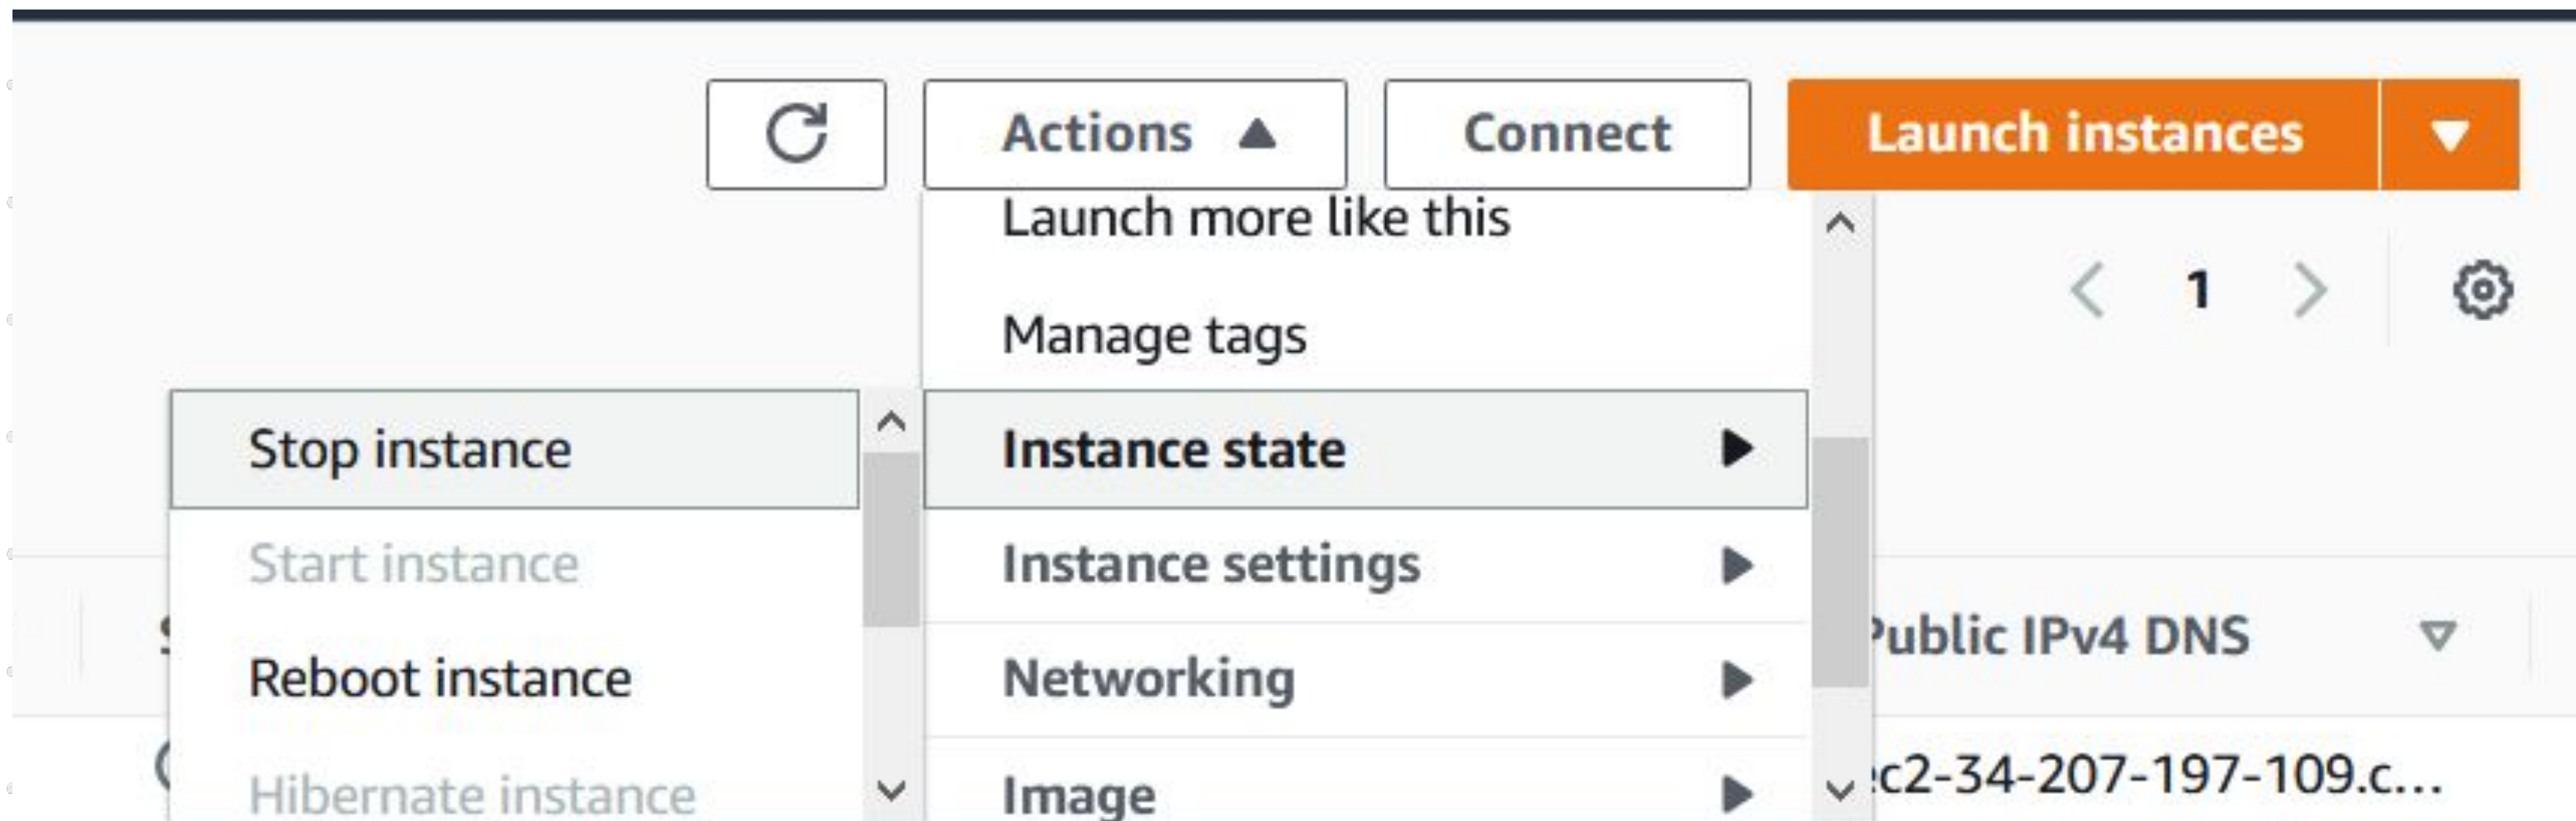

- The default AWS user (centos) is only accessible using a key
- Consider setting a password and sudo access

```
[centos@ip-172-31-44-70 ~]$ sudo usermod -aG wheel centos
[centos@ip-172-31-44-70 ~]$ passwd
Changing password for user centos.
Changing password for centos.
[centos@ip-172-31-44-70 ~]$ echo "migration time" > migrate.txt
[centos@ip-172-31-44-70 ~]$ cat migrate.txt
migration time
[centos@ip-172-31-44-70 ~]$ sudo shutdown -h now
```

Turn Off The Instances

- Prepare to attach the Volume for the Instance to Migrated to the Clonezilla Instance
- The Instances to be Migrated and Clonezilla **MUST** be turned off to do this

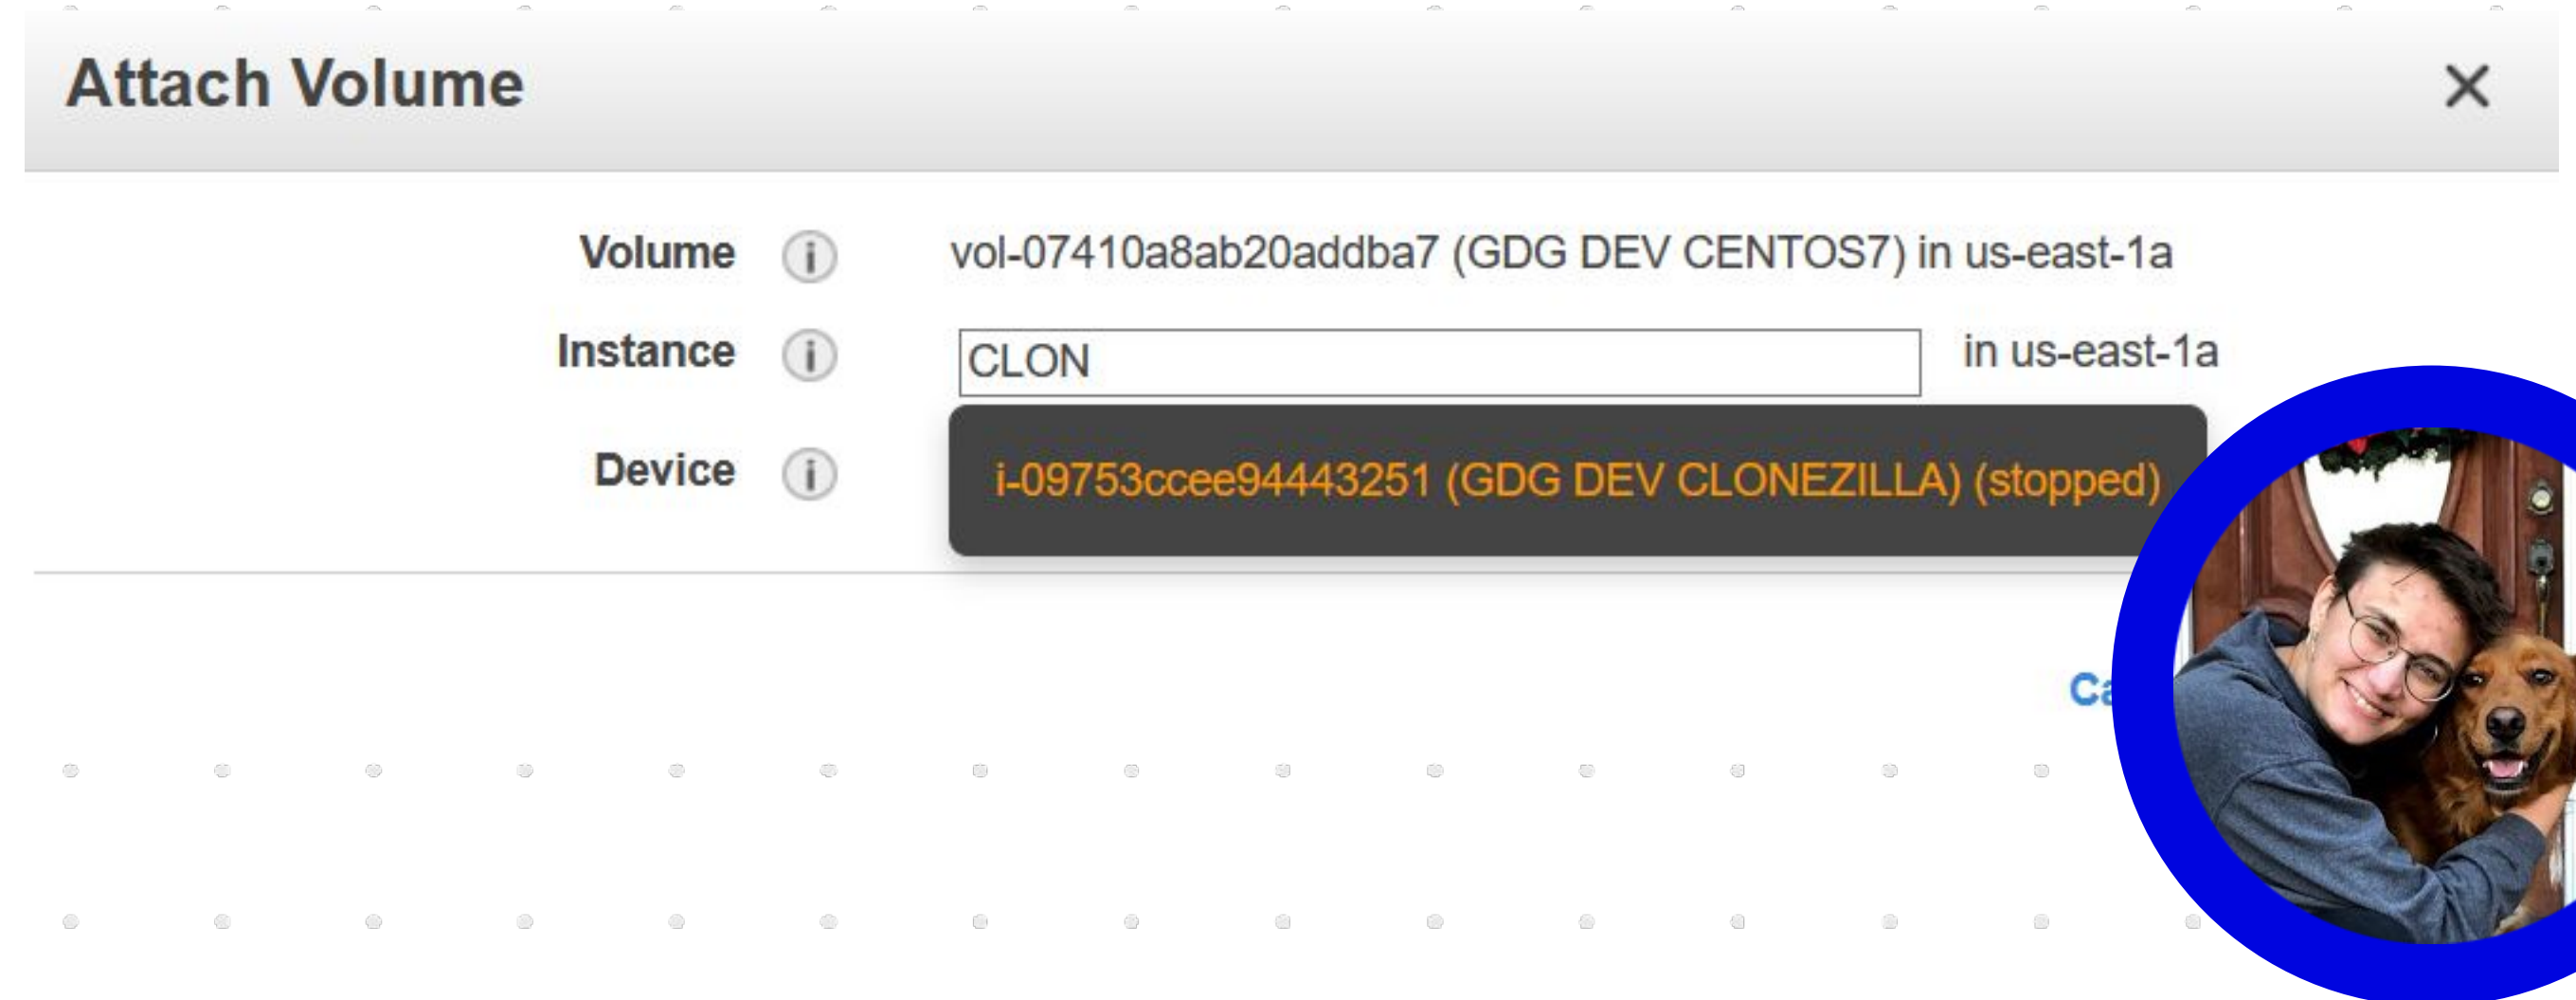

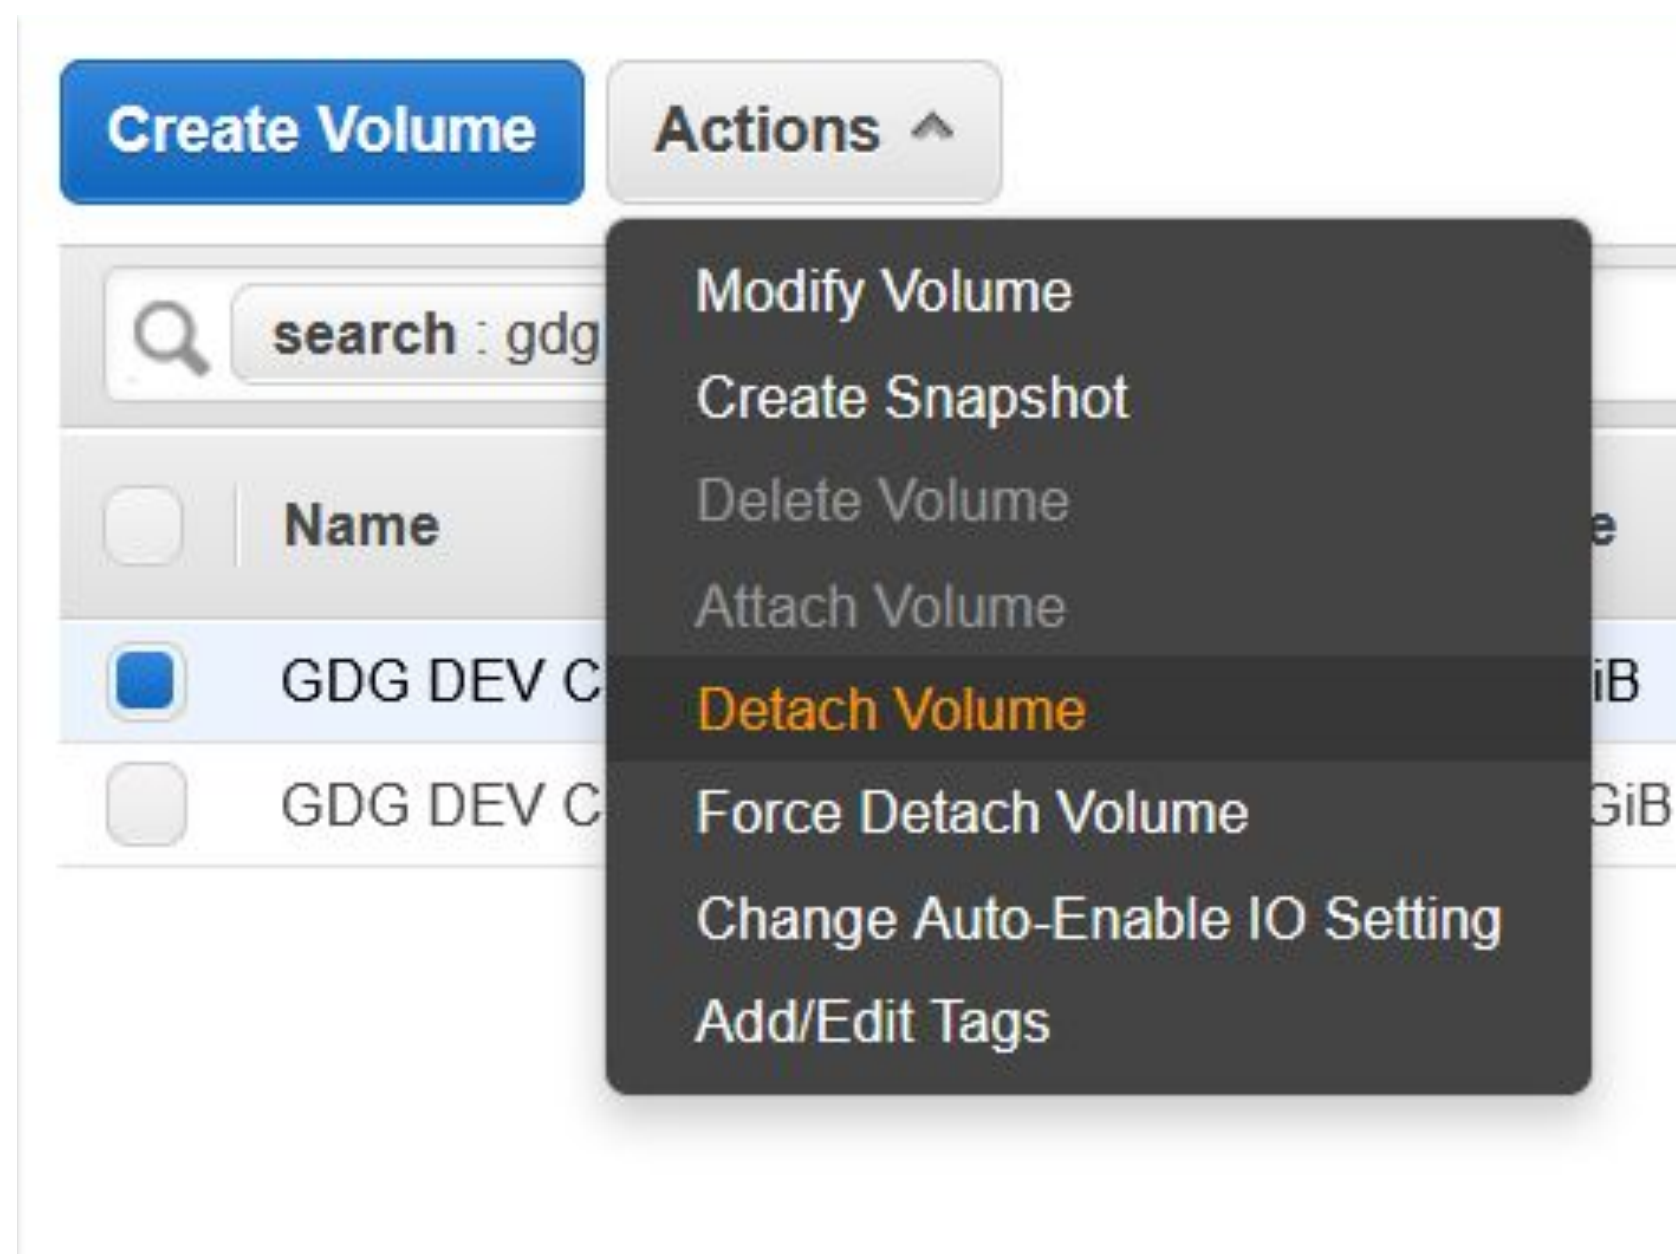

Detach & Attach Volume

- Detach the Volume to be Transferred
- Attach the Volume to Clonezilla Instance

HINT #1: Use the Default location of `/dev/sdf`

HINT #2: Name the Volumes & Instances in AWS for Easy Identify instead of AWS' long id strings!

Prepare Destination Machine

For Best Results: The Destination Machine should match the MINIMUM specifications from the source and the exact same or more storage space.

Name	vCPUs	RAM (GiB)	CPU Credits/hr
t2.nano	1	0.5	3
t2.micro	1	1.0	6
t2.small	1	2.0	12

Source Clonezilla (AWS)

```
admin@ip-172-31-37-239:~$ sudo clonezilla
```

Clonezilla - Opensource Clone System (OCS)

Clonezilla is free (GPL) software, and comes with ABSOLUTELY NO WARRANTY

///Hint! From now on, if multiple choices are available, you have to press space key to mark your selection. An asterisk (*) will be shown when the selection is done///

Two modes are available, you can

(1) clone/restore a disk or partition using an image

(2) disk to disk or partition to partition clone/restore.

Besides, Clonezilla lite server and client modes are also available. You can use them for massive deployment

Select mode:

device-image work with disks or partitions using images

device-device work directly from a disk or partition to a disk or partition

remote-source Enter source mode of remote device cloning

remote-dest Enter destination mode of remote device cloning

lite-server Enter_Clonezilla_live_lite_server

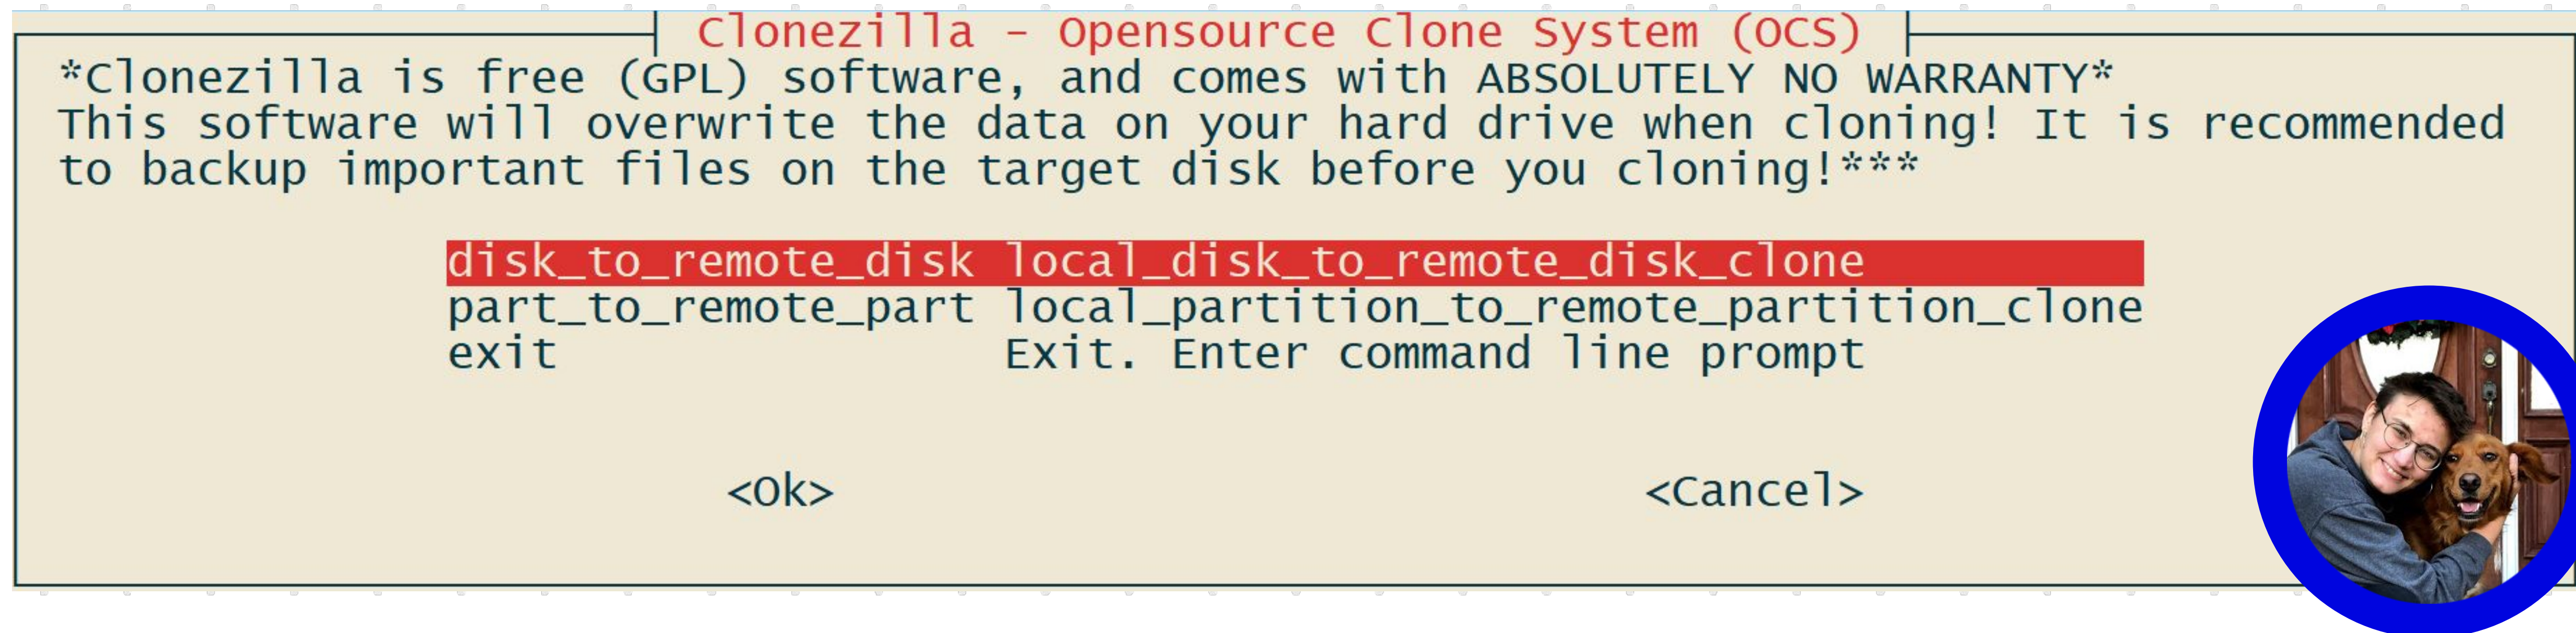

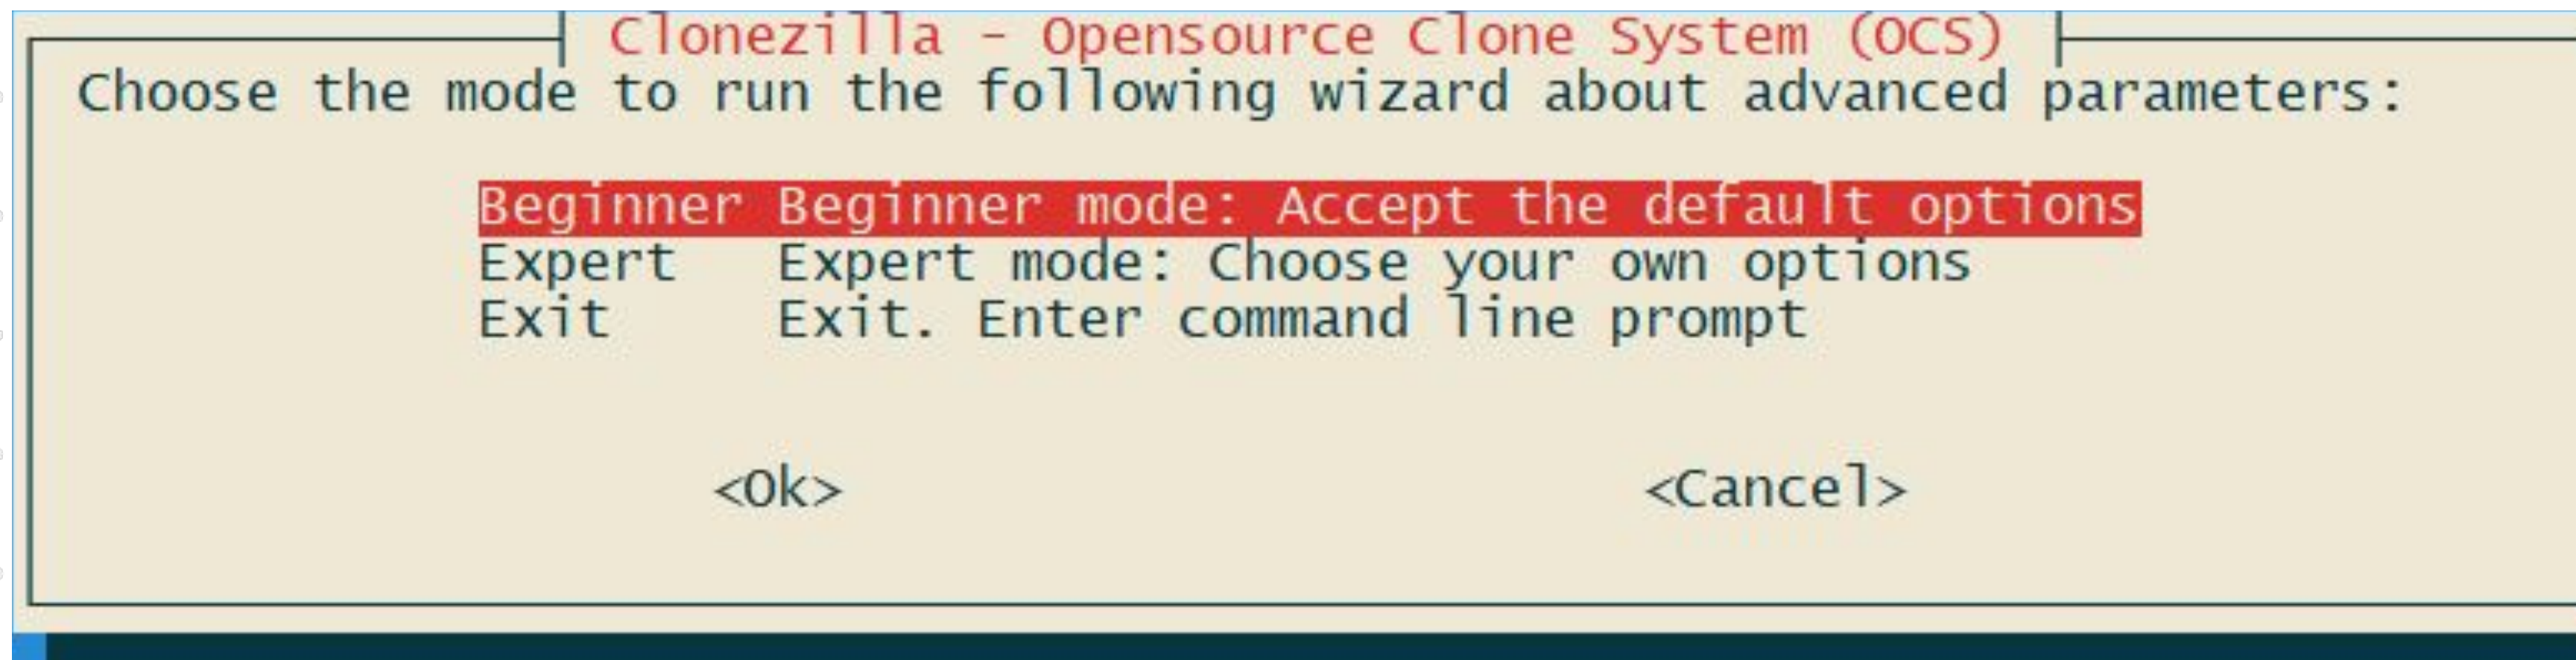

lite-client Enter_Clonezilla_live_lite_client

<Ok>

<Cancel>

Source Clonezilla (Cont.)

Source Clonezilla (Cont.)

Clonezilla - OpenSource Clone System (OCS) | Mode: disk_to_remote_disk

Choose local disk as source.

The disk name is the device name in GNU/Linux. The first disk in the system is "hda" or "sda", the 2nd disk is "hdb" or "sdb"...

xvdf 8590MB_Unknown_model_No_disk_serial_no

<Ok>

<Cancel>

Clonezilla on-the-fly advanced extra parameters | Mode: disk_to_remote_disk

Set the advanced parameters (multiple choices available). If you have no idea, keep the default value and do NOT change anything.:

-sfsc skip checking/repairing source file system

-fsck Interactively check and repair source file system before cloning

-fsck-y Auto (Caution!) check and repair source file system before cloning

<Ok>

<Cancel>

Source Clonezilla (Cont.)

```
Mode: disk_to_remote_disk
The action to perform when everything is finished:

-pa choose    Choose reboot/shutdown/etc when everything is finished
-pa reboot    Reboot
-pa poweroff  Shutdown

                <Ok>                        <Cancel>
```

```
PS. Next time you can run this command directly:
/usr/sbin/ocs-onthefly -g auto -e1 auto -e2 -r -j2 -sfsck -pa choose -a -f xvdf
This command is also saved as this file name for later use if necessary: /tmp/ocs
20-10-13-22-12
*****
Press "Enter" to continue...

Migrating a Windows Box

Windows Machine to Migrate

Windows Server 2019 Datacenter Edition
(from AWS Marketplace)

- 30GB Magnetic Storage
- **Same Availability Zone**
 - t2.micro
 - 1 GB RAM
 - 1 vCPU
- Security Group: RDP

Microsoft Windows Server 2019 Base - ami-0eb7fbcc77e5e6ec6

Microsoft Windows 2019 Datacenter edition. [English]

Root device type: ebs

Virtualization type: hvm

ENA Enabled: Yes

Make Sure You Have Credentials

- Get Instance RDP Details and Password

Get Windows password [Info](#)

Retrieve and decrypt the initial Windows administrator password for this instance.

To decrypt the password, you will need your key pair for this instance.

Key pair associated with this instance

[Redacted key pair name]

Browse to your key pair:

Browse

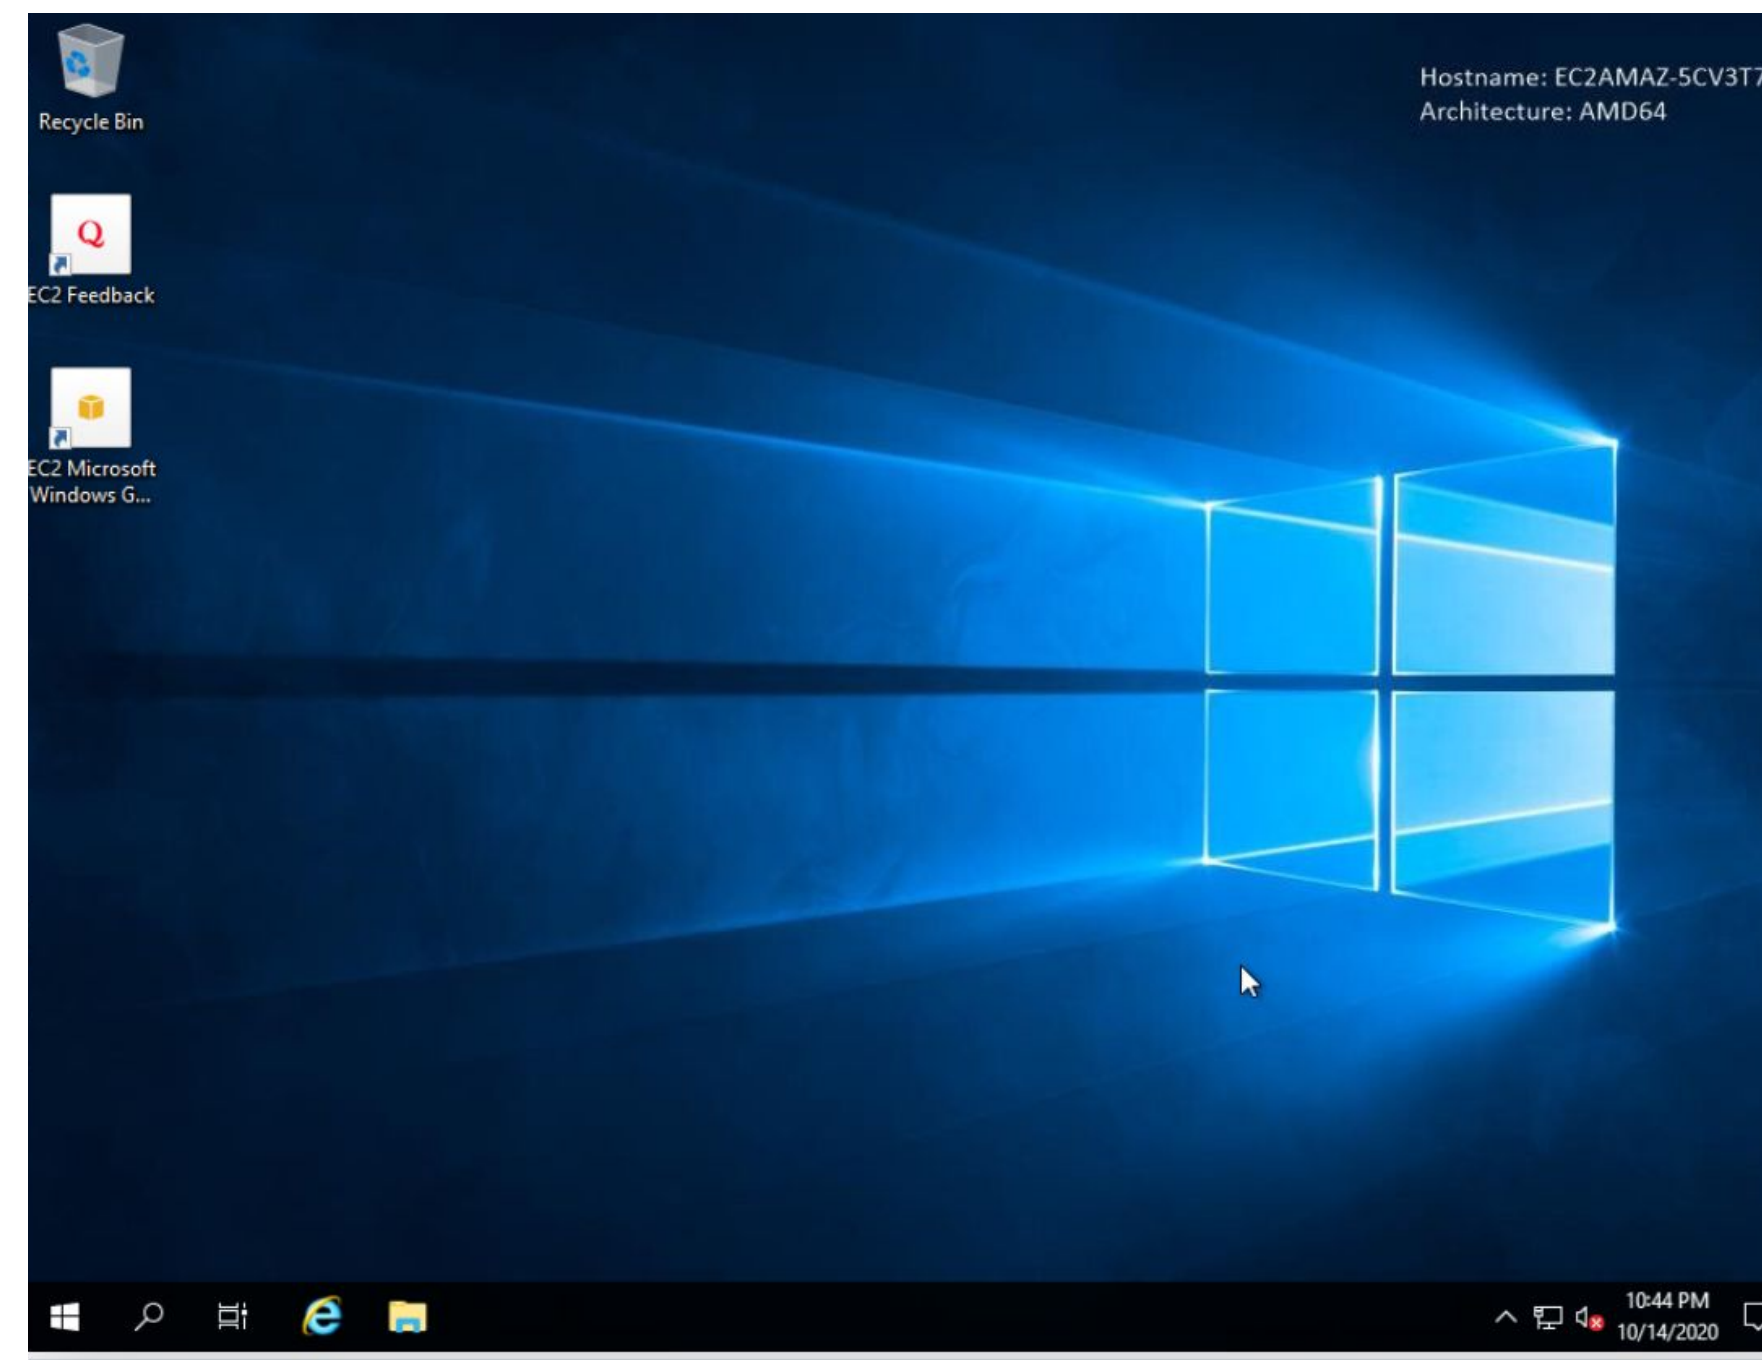

Or copy and paste the contents of the key pair below:

Migration is the Same

- Follow the same steps as with the Linux box
 - Configure the network how you like
(Static, DHCP, Public, Private, etc)

NOTE: Will need to know the IP for RDP!

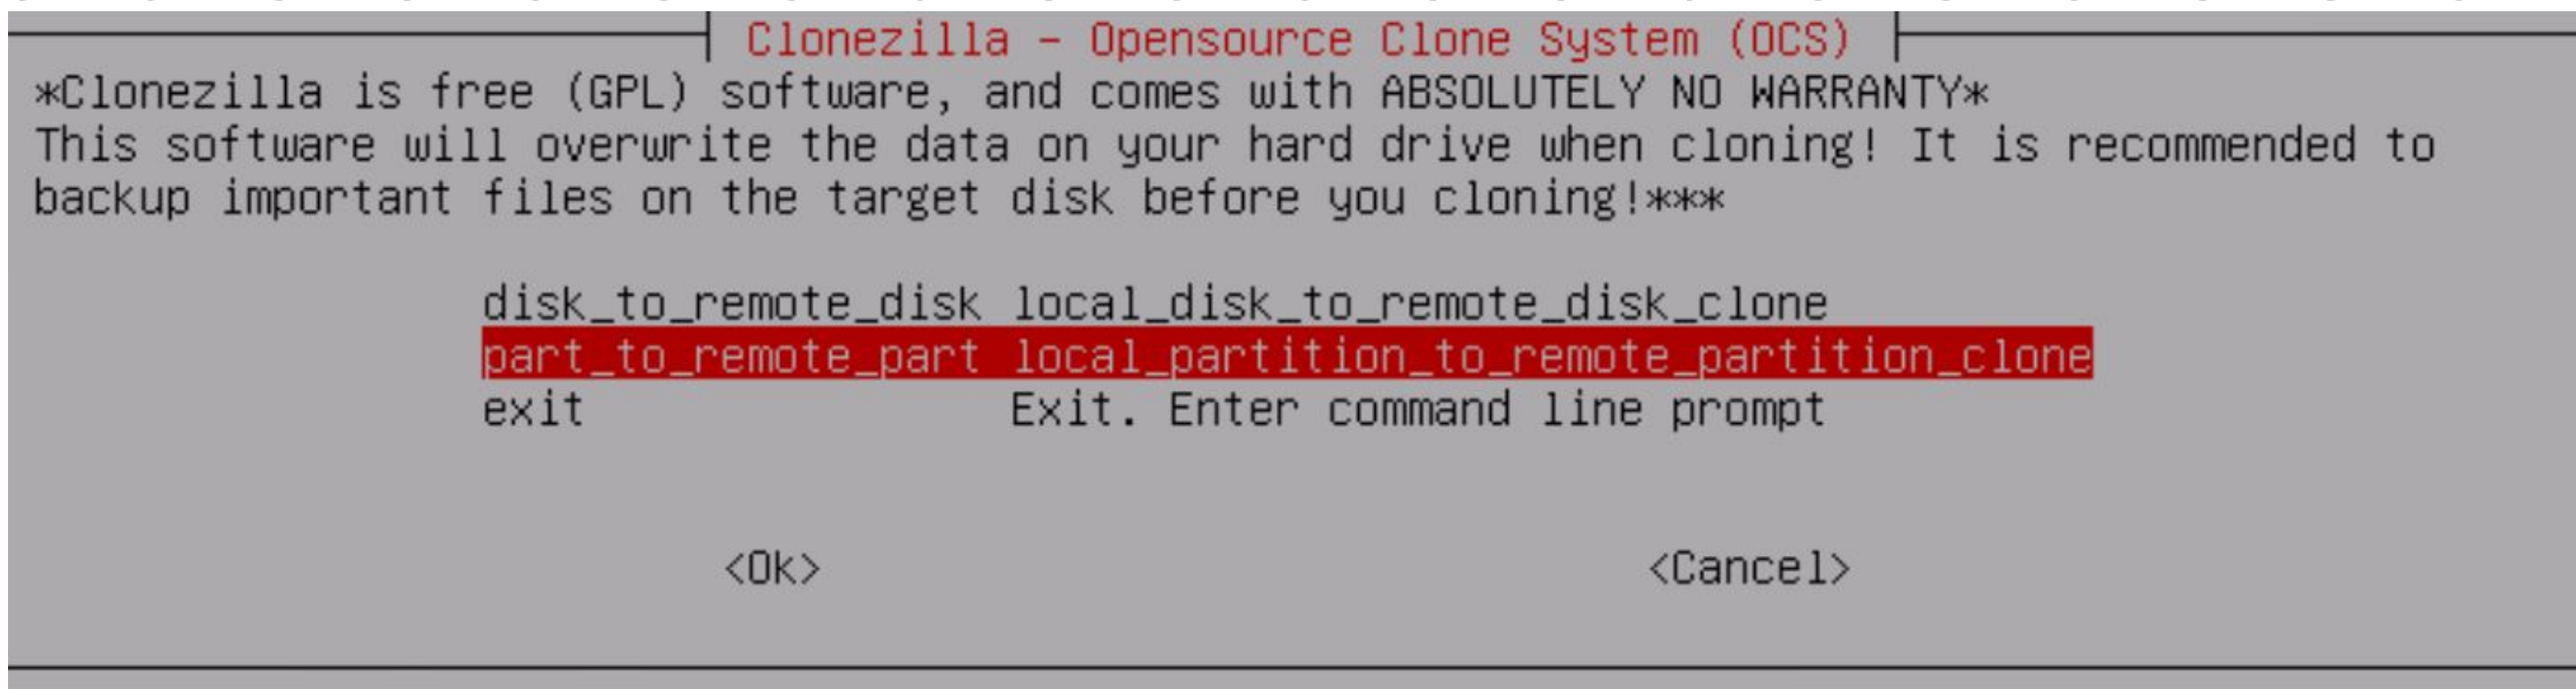

Final Notes from KAM

Bombing Out after Partition 1?

- We found a repeatable issue with one box where partitions after the first.

-

- SOLUTION: Clone it like normal. When it fails on partition 2, the partition table has already been cloned. Now use partition to partition overtop for the other Partitions. Works great!

A screenshot of the Clonezilla - Opensource Clone System (OCS) command menu. The window title is "Clonezilla - Opensource Clone System (OCS)". The text inside the window reads: "*Clonezilla is free (GPL) software, and comes with ABSOLUTELY NO WARRANTY*", "This software will overwrite the data on your hard drive when cloning! It is recommended to backup important files on the target disk before you cloning!***", "disk_to_remote_disk local_disk_to_remote_disk_clone", "part_to_remote_part local_partition_to_remote_partition_clone", "exit Exit. Enter command line prompt". At the bottom, there are two buttons: "<Ok>" and "<Cancel>".

```
Clonezilla - Opensource Clone System (OCS)
*Clonezilla is free (GPL) software, and comes with ABSOLUTELY NO WARRANTY*
This software will overwrite the data on your hard drive when cloning! It is recommended to
backup important files on the target disk before you cloning!***

disk_to_remote_disk local_disk_to_remote_disk_clone
part_to_remote_part local_partition_to_remote_partition_clone
exit Exit. Enter command line prompt

<Ok> <Cancel>
```

Avoid the Issue to Begin With

Consider tools like spinning up boxes in Vmware ESXI or VirtualBox and then importing into the cloud

Licensing

IMPORTANT: Boxes with licensing like Windows WILL
report being unlicensed soon
(though it might take some time).

Cloud Pros & Cons

Ease of Licensing with hosting like AWS

However, ESXI is free and a great tool!

Anthos is also amazing but not Free.

Three main types of Data Centers.

EACH TYPE HAS A PURPOSE!

Total Cost of Ownership

Virtual Machines STILL need administration!

55 points for an full-time IT Administrator

1 point per workstation

5 points per server

4 points per virtual server

Death by Papercuts #1

Boot from General Purpose (SSD)

×

General Purpose (SSD) volumes provide the ability to burst to 3000 IOPS per volume, independent of volume size, to meet the performance needs of most applications and also deliver a consistent baseline of 3 IOPS/GiB.

☐ Make General Purpose (SSD) the default boot volume for all instance launches from the console going forward (recommended).

☐ Make General Purpose (SSD) the boot volume for this instance.

☒ Continue with Magnetic as the boot volume for this instance.

Free tier eligible customers can get up to 30GB of General Purpose (SSD) storage.

☐ Don't show again

Next

Death by Papercuts #2

Product Details

Name	vCPUs	RAM (GiB)	CPU Credits/hr	On-Demand Price/hr*	1-yr Reserved Instance Effective Hourly*	3-yr Reserved Instance Effective Hourly*
